

June 2018

**Environmental Biology Master's Internship
ENV 591/ENV 591G**

I. Requirements

1. The student initiates the process by meeting the following requirements:
 - a. Completing at least 21 credits of coursework toward the degree.
 - b. Completing both statistics courses (ENV 505 & 515) as part of the above 21 credits.
 - c. Holding a GPA of 3.0 or greater in the ENV program.
2. Working in conjunction with a Hood ENV faculty member, the student arranges the details of the internship. This includes:
 - a. Identifying and confirming the organization/site of the internship and an on-site advisor.
 - b. Identifying the start and end dates of the internship.
 - c. Establishing a schedule that totals **a minimum of 180 hours** of on-site internship participation.
3. In collaboration with the on-site and faculty advisors, the student establishes a plan of work that includes a significant project to be solely completed by the student.
4. The student submits an **Internship Prospectus**. The Prospectus must be approved by both advisors and the ENV Program Director, as indicated by their electronic signatures on the document and/or email confirmation. Enrollment in ENV 591/ENV 591G cannot occur without an approved Prospectus.
5. During the course of the internship:
 - a. The student maintains a **weekly log and journal** of internship activities.
 - b. The student corresponds monthly via email with their Hood faculty advisor and submits the current internship log.
 - c. The faculty and on-site advisors communicate at least two times (at the half-way point and end of internship) to evaluate the progress of the intern. This communication is initiated by the Hood advisor.
6. To complete the internship, the student must submit the following to their faculty advisor for evaluation:
 - a. The completed weekly journal and log.
 - b. The final internship project/results summarized as a scholarly **paper**.

II. Sequence of the Internship Process

1. Locate an internship on-site advisor (this will be someone at the park/preserve/lab who plans to supervise your 180 hrs of internship work).
2. Come up with 2-4 possible project ideas for your internship. Although you can complete a series of tasks for your on-site advisor, you should have a small, independent, ENV-themed project that involves data collection and analysis, which will also simultaneously benefit your internship site. A list of past intern projects and sites is on pp. 3-4.
3. Summarize those ideas and e-mail them to your Hood internship advisor; be sure to cc your on-site advisor as well. Note that your Hood advisor may be your academic advisor or, even better, a faculty member with expertise that relates to your internship project area.
4. After your Hood advisor approves an idea, develop a prospectus with the assistance of your on-site advisor. This prospectus (~5-10 pages) should detail the objectives and duties of the internship. It should also describe, in detail with relevant background research provided*, the project to be completed by the student, including a timeline. See samples of the cover page (p. 5) and references cited page (p. 6).
5. Once your on-site advisor and you both feel that the draft prospectus is at its best, forward the file to your Hood advisor for feedback and approval.
6. After your on-site and Hood advisors BOTH approve the final draft prospectus, forward it to the ENV Program Director for final approval.
7. With the ENV Director's approval, register for ENV 591/ENV 591G. This will require the completion and submission of a "[Permission to Enroll](#)" form from the Graduate School.
8. Once enrolled in ENV 591/ENV 591G (3 credits), complete 180 hrs and the approved project—this can usually be done in 1-2 semesters, depending on the frequency of site visits. A student who does not complete the internship after one semester will be rolled over as In Progress ("IP") each semester until the requirements are completed. The fee for the three credits is only paid once at the original registration date. If "IP" status occurs for this course in any given semester, the student only pays Hood's comprehensive fee.
9. Upon completion of the project, write up the summary/findings in scientific format.*
10. Once your on-site advisor and you both feel that the final document is at its best, forward the file to your Hood advisor for feedback and approval. Also send your completed time-log, documenting 180 hours of project work, to your advisor.
11. After your on-site and Hood advisors BOTH approve the final document, forward it to the ENV Program Director for approval. The Director will confirm with the Hood advisor that the 180 hour requirement has been met.
12. With the ENV Director's approval, a student's final grade for ENV 591 (S/U) will be entered in consultation with the internship advisors

* Any information in your proposal or final document that is used/learned from a source should be cited in the text. Follow a consistent format from one particular journal that is chosen by your adviser and is appropriate to the sub-discipline of your research. A [Name-Year](#) format well or you could use the [numbered format](#) if that corresponds to the format of the journal that you have chosen; the numbered format is also useful if many of your sources are government/public documents with unclear or organizational authorship. The Hood College library website gives information on [citing sources](#), including instructions on how to use a reference manager like [Zotero](#). Using a reference manager is highly recommended, especially if you have a lot of sources, to ensure consistency in formatting and correspondence between all of your in-text citations and the references listed in your proposal and final document.

III. Sample of Past Internship Project Titles

- Effectiveness of specific soil treatments to increase nutrients on an organic hayfield at Fox Haven Organic Farm
- Identification of potential wetland habitats throughout the C & O Canal National Historical Park
- Observational study of saprobic and ectomycorrhizal macrofungi growing around slash piles on a 15 year old Douglas-Fir tree farm located in the Willamette Valley
- Winter survey and control of the invasive species *Elaeagnus spp.*, *Lonicera spp.*, and *Maclura pomifera* along the Sensory Trail at Catoctin Creek Park and Nature Center in Middletown, MD.
- Emerald Ash Borer Management Plan for the Chesapeake & Ohio Canal National Historical Park
- Evaluating the influence of three streams with varying levels of associated land development on Little Seneca Lake in Boyds, Maryland, and developing sampling and evaluation techniques for ongoing monitoring by secondary science students
- Evaluating the effectiveness of herbicide treatment on non-native *Ailanthus altissima* within the Monocacy Battlefield National Park in Frederick, Maryland
- Lamb's Knoll Owl Banding Project
- Developing protocols for water quality mapping for Frederick County Health Department using ArcMap GIS
- Analysis of the efficacy of the combination of spraying and pulling of invasive *Oplismenus undulatifolius* (wavyleaf basketgrass) in Little Paint Branch Park
- Evaluating prey delivery and land-use classes within the habitat of a nesting bald eagle pair (*Haliaeetus leucocophalus*) using remote technology at the National Conservation Training Center
- Monitoring the ecological integrity of a historically disturbed wetland: Integration of quality assessment metrics with amphibian indices of biological integrity

Past ENV Internship Sites

Audrey Carroll Audubon Sanctuary	Mt. Airy, MD
Belle Prairie Farm	Big Pool, MD
Center for Coastal and Watershed Studies (Hood College)	
Fish and Wildlife Service	
National Conservation Training Center	Shepherdstown, WV
Directorate Resource Assistant Fellows Program (DFP):	http://www.fws.gov/workforwildlife/
Fountain Rock Park & Nature Center	Walkersville, MD
Fox Haven Farm	Jefferson, MD
Fred Archibald Audubon Sanctuary	New Market, MD
Frederick County Division of Parks and Recreation	Middletown, MD
NASA DEVELOP program	http://develop.larc.nasa.gov/
National Park Service	
C&O Canal National Historical Park	Hagerstown, MD
Monocacy Battlefield National Park	Frederick, MD
